### Abstract

Optimizing the implementation of sirekap application interference in the 2024 election has an important role in the general election process (election). The election results have been announced (2024) the recapitulation of the election results has been cheated. This writing method uses (Riveuw Literature). The voting process also needs to be carried out officially. The Sirekap application can also be used officially and can also be viewed via the website. Unfortunately, at the time of voting, the KPU confirmed that the voting results were fraudulent and failed, so that's why the results were declared a failure and this is also what makes the public not trust the election results that have been issued or determined and also Ihsan Maulan also said, it is not surprising that the public is worried and asking questions about the results of the 2024 elections. Investment in development is needed. technology and training aims to ensure that sirekap can function effectively, it also requires backup and technical support that can overcome disruptions or failures experienced during voting.

**Keywords :** Election, Beginner Voters, Political Participation

### Introduction

The implementation of elections in Indonesia should be able to establish an election system that can be applied for a long time with the same model. So that in every election, there is no need for new laws or regulations because there are already comprehensive and coherent regulations. Amir, M. (2020). General elections are a concrete manifestation of the implementation of democracy in Indonesia which provides a role for citizens to be able to participate directly in electing public officials. This proves that sovereignty remains in the hands of the people. Democracy and democratic elections are "qonditio sine qua non", the one cannot exist without the others. In the sense that elections are interpreted as a procedure to achieve democracy or are procedure for transferring popular sovereignty to certain candidates to occupy political positions. Elections are only an instrument and can be guaranteed based on constitutional principles and direction the country's policy in question. Therefore, methods can be maintained or changed if they are seen as the correct democratic path under certain conditions. Determining a choice must go through a lot of thought and experience to determine whether the choice itself is good or bad. The political system in Indonesia is the direct election of the President and Vice President, which is a form of popular sovereignty where the people can directly determine who the leader of their government is. 3 This is actually nothing new for the Indonesian government system, because in every region in Indonesia, namely at the level the village community directly elects the head, but only in 2004 was the election of the head of government at the national level, namely the new president and vice president. used in Indonesia.4 There are still many who believe that this election is just a routine five-yearly event that is detrimental to the people. The election results alone cannot build a just and prosperous society according to the wishes of the country's founders.5 Even though we realize that in fact there are still many people who are not ready and failed to interpret it. The preparedness referred to is better political awareness and the level of public participation in holding elections. If it is said that society is now smart but it is interpreted to mean that anyone who offers an inducement will be accepted but when voting is a

personal matter, it must be changed that political awareness really starts from the beginning of the election stage until the end at the time of voting that there is no such thing as tolerance. money politics in any form.<sup>6</sup> In the history of the general election process, the election of legislative members and the presidential election have always been carried out separately. This has made some people feel that the implementation is inefficient and not in accordance with the 1945 Constitution. Due to this problem, regarding whether the holding of presidential and vice presidential elections which are held after the election of legislative members is contrary to the constitution or not, the Constitutional Court in its decision this time changed his considerations. Previously, in Decision Number 51-52-59/PUU-VI/2008, dated 18 February 2009, the Constitutional Court was of the opinion that Article 3 paragraph (5) of Law no. 42 of 2008 does not conflict with the constitution because this is a habit, which may indeed conflict with legal logic. This is because the President and/or Vice President are appointed by the MPR so based on general logic, the MPR must be formed first. So electing the DPR, DPRD, DPD first is a logical thing MK this mentioned.

The recapitulation of the vote count for the 2024 Election is currently being carried out by the General Election Commission (KPU). So, is there an official link to check the latest 2024 election vote count results?. The 2024 election series has not yet been completed after the national vote on February 14 2024. The next stage is the recapitulation of the vote count results before the 2024 election results are finally officially announced. As good Indonesian citizens, it is appropriate to monitor the recapitulation of the 2024 election vote count results on the official link which provides the latest data.

## Research Methodology

The research method used to collect information in this journal is the literature review method by conducting literature studies obtained from the internet in the form of literature reviews in local and national journals as well as articles that are relevant to the discussion in this journal.

## Result & Discussion

Sirekap often errors, needs to be done: People may not believe the results of the 2024 election. Researcher at the association for democratic elections or Needdem Ihsan Maulana highlighted the language of the effects of the Recapitulation or Sirekap information system application which often has problems, namely errors. According to Maulana, I. (2024) the Sirekap application, which is often problematic, will trigger errors in recapping the election vote results in stages from the sub-district level to the central level, as required by the Election Law. Apart from that, continued Ihsan, what is even more dangerous is that the public could not believe the results of the election which took place on February 14 2024. "Of course this will have an impact and raise the question, are the mistakes that occurred and related to Sirekap related to election fraud?" said Ihsan to Kompas TV in Jakarta on Friday

(16/2/2024). Therefore, Ihsan said, it is not surprising that the public is worried and asking questions about the results of the 2024 elections. Moreover, so far the public has not received good information regarding the security of the Sirekap application. Conversion in reading C1-Plano Model Form data or records of the 2024 Election vote counting results in the recapitulation information system (Sirekap). "We at the KPU are still ordinary people who are very likely to make mistakes," said Hasyim at the Indonesian KPU Office, Jakarta, Thursday (15/2/2024). He also ensured that the conversion error would be corrected immediately The KPU cannot lie and must convey correct information to the public.

<b>Writer</b>	<b>Title</b>	<b>Method Study</b>	<b>Findings</b>
Barokah, F., & Hertanto (2022)	Political Disruption: Opportunities and Challenges for New Political Parties Ahead of the 2024 Election	literature review	The emergence of new political parties in the era of disruption requires political parties to adapt their political branding strategies to this era. Political parties must make more use of cyberspace as a means of introducing themselves party via social media. This can lead to social media wars between political parties, various social media (social media) pages will definitely heat up and become volatile.
Amir, M (2020)	The Most Ideal Simultaneous Election for 2024 Based on the Decision of the Constitutional Court of the Republic of Indonesia	Conducted a review	The Association for Elections and Democracy (Perludem) conducted a material test Law against the 1945 Constitution to the Constitutional Court Needem is a non-governmental organization operating in the field of electoral activities whose activities include studying elections and democracy,
Prakaya, R., Katili, Y., & Latuda, F. (2022).	Proportional Election System in the 2024 Election Analysis	Literature Riveuw	In 2019 the open proportional system was implemented simultaneously with general election of president and vice president, where an electoral system is regulated in the law definitely has implications that will have consequences technical implementation of each stage of the Election both in terms of administrative requirements,

Optimizing the implementation of SIREKAP application disruptions in the 2024 elections could involve several strategic steps: Continuous Monitoring and Improvement: Continuously monitor the performance of the SIREKAP application during the election and quickly fix problems that arise. Strengthening IT Infrastructure: Ensure that the IT infrastructure that supports the SIREKAP application is strong and reliable enough to handle traffic spikes during the election process. Trials and Simulations: Conduct trials and simulations of election scenarios to identify potential problems and fix them before the actual election. Increased Security: Strengthening the security of the SIREKAP application to avoid cyber attacks and data manipulation that could disrupt election integrity. User Training: Provide training to election officials and voters on how to use the SIREKAP application effectively and ensure a good understanding of the election process. Effective Communication: Provide a clear and responsive communication channel to report technical problems or disruptions to the SIREKAP application during

the election. Partnership with Technology Experts: Involving technology experts and IT experts in the development and maintenance of the SIREKAP application to ensure its quality and reliability. Transparency and Accountability: Ensure transparency in the management and use of the SIREKAP application and take responsibility for any disruptions or failures that occur. By implementing the steps above, it is hoped that the application of the SIREKAP application in elections can be optimized so that the election process runs smoothly and the results can be trusted.

Digital transformation has an important role in general elections by providing various significant benefits. First, the use of technology can increase the efficiency of the election process, from voter registration, distribution of ballot papers, to counting and reporting election results. Second, digital transformation can expand voter participation by providing easier access online platforms, reducing physical and geographical barriers, and increasing the involvement of young voters and voters abroad. Apart from that, digital transformation can also increase transparency and security in general elections with an automation system that can minimize the risk of fraud and manipulation. Implementing e-voting as part of digital transformation has significant potential benefits. In the context of general elections, e-voting can increase the speed of vote counting, reduce the cost of printing ballot papers, and eliminate the need for complicated election logistics. Apart from that, e-voting can also increase the accuracy of vote counting, reduce the risk of human error, and provide accessibility for voters who have physical limitations or are in remote locations. However, the implementation of e-voting is also faced with challenges that need to be overcome. These challenges include issues regarding the security of voter data and information, privacy protection, as well as cyber attacks that can threaten the integrity of elections. Apart from that, another challenge is public trust in the reliability and legitimacy of the e-voting system, as well as the digital divide which affects accessibility for some voters. Risk mitigation strategies and efforts to increase public awareness about e-voting are important keys in overcoming this challenge. E-Voting: Concept and Methodology E-Voting, or electronic voting, refers to the general election process that uses electronic technology to facilitate and manage the entire election process, starting from voter registration, voting, to calculating and reporting results. In the e-voting concept, voters use electronic devices.

## Conclusion

The conclusion of optimizing the implementation of SIREKAP application interference in elections is that continuous efforts to improve the security, reliability and performance of the application are very important. Investment in technology development and training is needed to ensure that SIREKAP can function effectively during the election process, thereby ensuring election integrity and transparency. Apart from that, it is necessary backup mechanisms and strong technical support to overcome any glitches or failures that may occur during voting and vote counting. It requires investment in technology development and training so that the sirekap can function effectively, it also requires backup and technical support that can overcome disruptions or failures experienced during voting.
